

Task 01

Basic Software Testing Concepts

1. Software Testing

Software testing is the process of checking software to find errors and make sure it works correctly.

2. Manual vs Automation Testing

- **Manual Testing:** A tester checks the software manually without using automation tools.
- **Automation Testing:** Tools and scripts are used to automatically test the software.

3. Levels of Testing

- **Unit Testing:** Tests a small part of the program, such as a function.
- **Integration Testing:** Checks whether different modules work correctly together.
- **System Testing:** Tests the complete software system.
- **Acceptance Testing:** Checks whether the software meets the customer's requirements.

4. Testing Techniques

- **Black Box Testing:** Tests the software without knowing its internal code.
- **White Box Testing:** Tests the internal code, logic, and structure of the software.

Short Summary

Software testing helps find bugs, improve quality, and ensure that the software meets user requirements.

Task 02

Test case ID	Test Description	Input	Expected Result	Actual Result	Status
TC-001	Testing for addition	2+3	5	5	pass
TC-002	Testing for subtraction	2-2	0	0	pass
TC-003	Testing for Multiplication	9*5	45	45	Pass
TC-004	Testing for Division	10 ÷ 5	2	2	pass
TC-005	Testing for negative numbers	-10+5	-5	-5	pass
TC-006	Testing for Subtraction negative numbers	-29-9	-38	-38	pass
TC-007	Testing for multiply by 0	3*0	0	0	pass
TC-008	Testing for adding decimal numbers	2.5+2.5	5	5	pass
TC-009	Testing for invalid character	10+A	Error	Error	pass
